Laser therapy is a safe, non-invasive, FDA cleared modality for the treatment of pain and the temporary increase of microcirculation. Increased microcirculation can provide relief for many acute and chronic conditions. Laser therapy utilizes visible and invisible laser radiation, therefore, appropriate eye protection is required at all times during treatment.

Effects of your treatment will continue for up to 18 hours. Individuals respond uniquely to treatment, you may see immediate results after the first treatment or depending on the severity of your condition you may require several treatments before you begin to feel results.

Increased soreness may occur after your first laser session. This is a normal healing phenomenon known as retracing. Mild bruising may occur from the soft tissue manual therapy element of your treatment program.

You are required to complete the Patient Intake Form prior to treatment to ensure that laser therapy is a viable option for you.

☐ I understand the above and consent to treatment

☐ I understand that failing to complete any part of my treatment program will reduce my chances of success.
